

**AMENDMENTS**

The claims are as follows:

1. (Previously Presented) A method for printing information comprising:  
storing information corresponding to a print task in memory in a print-ready format, such  
that information in the print-ready format can be printed by a printing device without being  
processed by a driver; **and**

selecting a portion of the information the print-ready format; and  
enabling ~~a~~the selected portion of the information in the print-ready format to be printed  
without printing a non-selected portion of the information in the print-ready format.

2. (Previously Presented) The method of claim 1, further comprising:  
providing a printing device; and  
printing the selected portion of the information in the print-ready format using the printing  
device.

3. (Original) The method of claim 2, wherein storing information comprises:  
storing the information in the print-ready format in memory associated with the printing  
device.

4. (Previously Presented) The method of claim 1, further comprising:  
receiving an input corresponding to a user's intent to print only a portion of the information in  
the print-ready format; and  
enabling only the selected portion of the information in the print-ready format to be printed.

5. (Previously Presented) The method of claim 4, further comprising:  
receiving an input corresponding to a user's intent to print the entire information in the print-  
ready format; and  
enabling the entire information in the print-ready format to be printed.

6. (Previously Presented) The method of claim 4, further comprising:  
enabling the user to select at least the portion of the information in the print-ready format to be  
printed.

7. (Previously Presented) The method of claim 6, wherein the printing device has a user  
interface; and

wherein enabling the user to select at least the portion of the information in the print-ready  
format comprises:

enabling the user to select at least the portion of the information in the print-ready format via  
the user interface.

8. (Original) The method of claim, 7 wherein the user interface is a graphical user  
interface.

9. (Previously Presented) The method of claim 6, further comprising:  
providing a driver, the driver being configured to receive information and configure the  
information in the print-ready format, the driver being further configured to provide a graphical user  
interface; and

wherein enabling the user to select at least the portion of the information in the print-ready  
format comprises:

enabling the user to select at least the portion of the information in the print-ready format via  
the graphical user interface.

10. (Previously Presented) A print system comprising:  
a job retention system configured to store print-ready information corresponding to a print  
task and to receive an input corresponding to a selected portion of the print-ready information, the  
print-ready information being configured for use by a printing device such that the information can be  
printed by the printing device without being processed by a driver of the printing device, the job  
retention system being further configured to enable the selected portion of the print-ready information  
to be printed without printing a non-selected portion of the print-ready information.

11. (Previously Presented) The print system of claim 10, further comprising:  
a printing device having a memory, the print-ready information being stored in the memory of  
the printing device; and  
wherein the job retention system resides in the printing device.

12. (Previously Presented) The print system of claim 10, wherein the printing device includes a user interface, the user interface being configured to enable a user to select at least the portion of the print-ready information.
13. (Original) The print system of claim 10, wherein the user interface is a graphical user interface.
14. (Previously Presented) The print system of claim 11, further comprising:  
a workstation communicatively coupled to the printing device, the workstation having a driver, the driver being configured to convert information into the print-ready information and provide the print-ready information to the printing device, the driver being further configured to provide a graphical user interface, the graphical user interface being configured to enable the user to select at least the portion of the print-ready information.
15. (Previously Presented) The print system of claim 10, further comprising:  
a workstation having a driver configured to provide a graphical user interface, the graphical user interface being configured to enable a user to select at least the portion of the print-ready information.
16. (Original) The print system of claim 10, further comprising:  
means for storing the information in the print-ready format.
17. (Original) The print system of claim 16, wherein the means for storing the information in the print-ready format is a disk drive.

18. (Original) The print system of claim 17, further comprising:  
a printing device associated with the job retention system; and  
wherein the disk drive is a component of the printing device.

19. (Original) The print system of claim 17, further comprising:  
means for configuring the information corresponding to the print task in the print-ready  
format.

20. (Original) The print system of claim 19, wherein the means for configuring the  
information is associated with a driver, the driver being configured to receive information in a non-  
print-ready format and convert the information to the print-ready format.

21. (Previously Presented) The method of claim 1, wherein the selected portion of the  
print-ready information defines a page of the print task.

22. (Previously Presented) The method of claim 1, wherein the selected portion of the  
print-ready information defines a range of pages of the print task.

23. (Previously Presented) The method of claim 1, wherein the storing information  
corresponding to a print task in memory in a print-ready format further comprises:  
storing a collection of information in the print-ready format corresponding to a plurality of  
print tasks in the memory.

24. – 26. (Cancelled).

27. (Previously Presented) The method of claim 1, wherein the memory is resident on the printing device, and wherein the storing step further comprises storing the information in print-ready format in the memory.

28. (Previously Presented) The method of claim 1, wherein the printing device has an input interface, the method further comprising the step of:  
receiving, via the input interface, an input for selecting the selected portion of the information in print-ready format.

29. (Previously Presented) The method of claim 28, further comprising the step of printing, in response to the input, the selected portion without printing the non-selected portion.

30. (Previously Presented) The system of claim 10, wherein the printing device has an input interface, wherein input is received via the input interface.

31. (Previously Presented) A system, comprising:

a printing device having an input interface; and

a job retention system configured to receive and store print-ready information corresponding to a print task, the job retention system further configured to receive selection information from a user, via the input interface, and configured to select a portion of the print-ready information based upon the selection information, the job retention system further configured to enable the selected portion of the print-ready information to be printed without printing a non-selected portion of the print-ready information.

32. (Previously Presented) The system of claim 31, wherein the selected portion and the non-selected portion of the print-ready information correspond to a single print task.

33. (New) A printer system, comprising:

memory configured to store print-ready information without further translation by a printer driver indicative of a document to be printed; and

job retention logic configured to receive a selection from a user indicative of a portion of the print task that the user desires to be printed, the job retention logic further configured to integrate with the print ready information a designation identifying the selected portion enabling the selected portion of the print ready information to be printed by a printing device.

34. (New) A printing method comprising:

receiving a print request;

converting information corresponding to the print request from a format that is not print-ready into a print-ready format such that the converted information can be printed by a printing device without being processed by a driver;

selecting a portion of the converted information subsequent to the converting; and

enabling the selected portion of the converted information to be printed without printing a non-selected portion of the converted information.
